☑ Passed LinkedIn Skill Assessment

Experience

Freelancing   **Kingsley Media Productions • January 2019 – Present | Dublin, Ireland**

- As a freelance professional, I offer a comprehensive range of web and multimedia services tailored to clients' needs.
- Specialising in frontend development, I build and deploy dynamic websites and applications using cutting-edge technologies such as React, Angular, and WordPress CMS. My goal is to bring creativity and functionality together to deliver compelling digital experiences.

Senior Software Engineer - Frontend   **Genesys • September 2022 – Jun 2024 | Remote (Galway, Ireland)**

- As a Senior Frontend Software Engineer, I played a pivotal role in the redevelopment of a critical admin panel used organisation-wide. Functioning as a lead developer, I leveraged my expertise in React design and implemented robust solutions that enhanced the efficiency and user experience of core administrative tools.
- By combining technical proficiency with strategic problem solving, I have played a pivotal role in advancing the development of the project, elevating its functionality and user experience.

Software Support Engineer (Frontend)   **New Relic • February 2021 – September 2022 | Dublin, Ireland**

- I provided expert software support to developers of major enterprise companies, helping them to integrate New Relic's products with their applications.
- Due to my experience in Frontend Development, I became part of a newly formed Frontend support team, working as one of the only two Subject Matter Expert (SME) in EMEA.
- As a part of the Frontend Support Team, I help provide expert support to developers working with New Relic's Browser agent, Synthetics Monitor and Containerised Private Minions (CPM).

Software Development Engineer I **Mastercard • July 2018 – January 2020 | Dublin, Ireland**

- Part of an agile (scrum) team, helping in the development and maintenance of a complex framework for securing APIs for application teams across the organisation.
- Lead developer for two major projects:
  - Redesign and features implementation of a frontend UI
  - Designed and created a system for monitoring important features of 48 application VMs.
- Brought up code coverage on four major Java applications by writing unit tests (Junit 5).
- Committee Member of Young Professionals (YoPros) Business Resource Group at Mastercard Ireland.
- Videographer and Video Editor for Mastercard Ireland's *Tech Leadership Network (TLN)* and *Annual Intercultural Day*.
- Creator of *We Are Mastercard,* a video project that highlights diversity within Mastercard Ireland.

Recent Personal Projects

Cloudflarify
A web app that allows user to manger Cloudflare Zones.
- Cloudflarify is a spin off extension to cloudflare-delete-all-dns. This project is a freemium web application used for managing DNS records, by providing advance authentication and data table to view, amend and delete records.
- The core technologies used to build this app includes React for the frontend; a Firebase backend; Vite & Vitest for build and testing; PrimeReact for UI components; Redux with RTK Query for state management, data fetching (APIs) & caching.

cloudflare-delete-all-dns
This project is a web app that provides the ability to bulk delete Cloudflare DNS records within a Zone. Cloudflare does not currently support this feature.

astra-theme-animated-sticky-navbar
Gives users the ability to integrate an animated sticky navigation bar with the free version of Astra WordPress themes.

firebase-bitbucket-deploy
Sample apps and a custom YAML config to set up Firebase hosting and deployment with Bitbucket CI/CD pipelines.

kmp-website-initialiser
Used for structuring a website's home directory. It comes preloaded with a dynamic landing page system used for automatically maintaining a website's home directory. Built with JavaScript, PHP, HTML5 and CSS3 - for Apache Servers.
